# Contents

## **Part I: State of art research in AF**

### **Chapter 1** 9

General introduction and scope of the thesis.

### **Chapter 2** 25

Role of autophagy in proteostasis: friend and foe in cardiac diseases.

*Cells. 2018; 7(12).*

### **Chapter 3** 52

Role of HDACs in cardiac electropathology: therapeutic implications for atrial fibrillation.

*BiocBiochim Biophys Acta Mol Cell Res. 2020;1867(3):118459.*

### **Chapter 4** 80

Imbalance of ER and mitochondria interactions: prelude to cardiac ageing and disease?

*Cells. 2019 Dec 12; 8(12).*

## **Part II: Experimental chapters: Protein Quality Control**

### **Microtubule preservation and SR-mitochondrial contacts**

### **Chapter 5** 100

Heat shock protein inducer GGA\*-59 reverses contractile and structural remodeling via restoration of the microtubule network in experimental Atrial Fibrillation.

*J Mol Cell Cardiol. 2019;134:86-97.*

### **Chapter 6** 131

Preservation of the microtubule network to beat atrial fibrillation: a key role of SR-mitochondrial contacts.

*Manuscript In preparation.*

## **Epigenetics and DNA damage**

### **Chapter 7** 156

Converse role of class I and class IIa HDACs in the progression of atrial fibrillation.

*J Mol Cell Cardiol.* 2018;125:39-49.

### **Chapter 8** 189

DNA damage-induced PARP1 activation confers cardiomyocyte dysfunction through NAD<sup>+</sup> depletion in experimental atrial fibrillation.

*Nat Commun.* 2019;10(1):1307.

## **Biomarker research**

### **Chapter 9** 238

Blood-based 8-OHdG level: a potential diagnostic biomarker for Atrial Fibrillation.

*Heart rhythm. In press*

### **Chapter 10** 255

Long non-coding RNA Sarrah and UCA1: potential markers to stage the electropathology of Atrial Fibrillation.

*Manuscript in preparation.*

## **Part III: General discussion and summary**

### **Chapter 11** 280

Summary, general discussion and future perspectives.

## **Appendices**
